

SENNEBOGEN at INTERMAT 2015 – Solutions extending from special underground engineering to material handling

21 January 2015 by SENNEBOGEN Maschinenfabrik

As a German family-owned company, SENNEBOGEN can look back on more than 60 years of experience in the development and construction of special machinery. SENNEBOGEN offers intelligent solutions for demanding applications in the construction industry, the rental crane sector, and in material handling. SENNEBOGEN will be exhibiting in Paris together with SYGMAT from April 20 to 25 .

On a booth covering more than 300 m², visitors can expect to see several new products. Two machines, the 6113 telescopic crawler crane and the new 640 HD duty cycle crawler crane, will be making their debut at the exhibition. In addition, the current SENNEBOGEN Green Line material handling machines will also be on display at the exhibition booth, which is being shared by manufacturer SENNEBOGEN and its French sales and service partner SYGMAT. Visit us at booth Ext-6 D060 in the outdoor exhibition area.

SENNEBOGEN telescopic crawler cranes: Flexible and ready for work in no time

With the new SENNEBOGEN 6113, the Lower-Bavarian crane manufacturer presents its biggest telescopic crawler crane yet. A safe working load of 120 tons, a proven boom concept, and a high level of flexibility characterize the new SENNEBOGEN model. With the model 6113 the company, headquartered in Straubing, Germany, is extending the maximum safe working load of its telescopic cranes upwards by 50%. The key advantage of the machine is the strong telescopic boom. As is the case with all machines in this series, it is also designed as a Full-Power boom. Thanks to multi-cylinder technology, this maintenance-free system enables continuous telescoping and is always friction-locked. Feel the excitement.

SENNEBOGEN duty cycle crawler cranes: Reliable and versatile

Addition of the new SENNEBOGEN 640 HD to the current E-Series means that starting in 2015 there will be a new duty cycle crawler crane for numerous applications in the areas of well digging, underground engineering, and mining as well as for use as a crane. With more than 60 years of experience in the construction of cranes and duty cycle crawler cranes, SENNEBOGEN is extending its broad product range even further by adding the new model 640 machine to the current E-Series. Thanks to its robust construction, a powerful multi-circuit hydraulic system, and the strong slewing drive, the 40-ton duty cycle crawler crane is particularly well-suited for special civil engineering work. Applications with leaders or rope grapples can be

realized with the same high level of reliability that is offered for operation of hydraulic casing oscillators in the areas of well digging or underground engineering. Experience the machine on site.

SENNEBOGEN material handling machines: Green Line

The Green Line material handling machines offer impressive performance in applications ranging from recycling to scrap handling, to port handling, and special applications around the world. With the proven SENNEBOGEN modular system, the perfect machine can be designed for every material handling challenge. A number of undercarriage variants, from mobile to crawler gantry, and various equipment lengths and attachments ensure Green Line machine flexibility. The E-Series machines offer convincing performance thanks to modern fuel-saving Stage IV engines with optimal fuel efficiency and the highest level of operating comfort. Visit us and see for yourself.

SENNEBOGEN & SYGMAT

As the SENNEBOGEN sales and service partner in France, SYGMAT has been selling the cranes and material handling machines produced by the Lower Bavarian manufacturer for many years. Part of the Vincent Group, SYGMAT also handles spare parts and maintenance and is the competent contact on site.
