

Case to run daily visits to Paris Customer Centre for Intermat visitors

22 January 2015 by CASE Construction Equipment

Case Construction Equipment will run two daily visits to the Case Customer Centre Paris every day of the Intermat exhibition in April – one in the morning and one in the afternoon.

Visitors to the show will be able to take the Case shuttle to the Case Customer Centre located in Monthyon, where they will be able to experience a wide range of machinery in action and test drive the new models in job site working conditions on the demonstration and testing grounds.

The Customer Centre's dedicated team of Case specialists and demonstrators will present the full range of Case equipment, showcasing its productivity, versatility and efficiency. They will be ready to provide detailed information about the machines and Case services available to customers and to answer any queries visitors may have.

The extensive testing grounds will enable visitors to try out the machines in a variety of applications with guidance from the Centre's Case specialists who will show them how to get the best performance from the equipment and the technologies it features.

At the end of the half-day visit, the Case shuttle will take visitors back to the Intermat exhibition grounds, so they will be able to resume their visit after their full Case experience.
