

A very impressive range of new XT trailed spreaders

6 March 2015 by SULKY

The XT range of trailed fertiliser spreaders has been strengthened by the arrival of additional technologies and even more user comfort. The XTs, available in mechanical (XT 100, 130 and 160) or hydraulic (XT 160, 210 and 240) versions, are multi-purpose and provide spreading for granules, powder, organic pellets or even humid bulk fertiliser.

Very large widths do not scare it...

The new generation of XTs has the advantage of the patented *Epsilon* spreading system making it possible to spread good granules fertiliser over a width of up to 50 m. To achieve this performance the *Epsilon* system incorporates longer, dual-layer vanes and curved spreading discs.

This *Epsilon* spreading system is well recognised for its performance on the X40-X50 range of mounted spreaders and now makes the XT range ultra-efficient.

A multi-function handle on hydraulic versions with booms

XT 160, 210 and 240 versions may be fitted with booms (12 or 14 m wide) for spreading powdered products. Control of the essential functions is provided by an intuitive handle. Among these functions we find:

- Optimised management of shut-offs and re-opening in headlands for instantaneous application
- Continuous control of boom valves for perfect transversal distribution
- Folding/unfolding of booms for transport.

ACCURACY, PERFORMANCE and VERSATILITY are the key words for this new range of trailed fertiliser spreaders.

The XT range:

XT 100 – 7,200 litres – 18-50 m; XT 160 H – 13,000 litres – 18-50 m

XT 130 – 9,500 litres – 18-50 m; XT 210 H – 13,000 litres – 18-50 m

XT 160 – 13,000 litres – 18-50 m; XT 240 H – 15,500 litres – 18-50 m
