

UniCarriers FCB Series Forklifts

26 March 2015 by UniCarriers

Provide Greater Reliability and Consistent Performance

Battery-powered, 3,000- to 6,000-pound capacity lift trucks with thermal protection ideal for a variety of environments

UniCarriers Americas Corporation's (UCA) FCB series battery-powered forklifts offer greater reliability and consistent uptime performance.

The TCM by UniCarriers brand FCB series lift truck is available in cushion-tire models in 3,000- to 6,000-pound capacities. Powered by a 100 percent AC motor and controller system, the FCB series consistently offers high performance throughout the shift on a single battery charge.

The FCB series is designed with fewer parts, requiring less maintenance and delivering highly dependable performance. FCB forklifts also offer standard operator comfort featuring a high-visibility carriage and adjustable seat with lumbar support and non-cinching seatbelt.

This lift truck series also features better cooling capacity and reliability for high uptime operation. Thermal protection sensors protect the motor and controller systems by reducing speed and alerting the operator to potential overheating. Information is stored in the truck's service history to assist technicians during troubleshooting.

"The hardworking and reliable FCB series forklifts minimize downtime and reduce preventable repair work, offering higher value to our customers," said Mark Porwit, director, marketing and product management, UniCarriers Americas. "The range of standard and optional features for this series optimizes efficiency, which translates into greater productivity for our customers."

The FCB series forklifts are equipped with return-to-neutral, and a standard seat-actuated operator presence system that automatically locks lifting and tilting when the operator exits the truck. The models feature three factory-set performance modes to simplify customization, as well as a manual mode that allows the user to create unique settings specific to applications or users. PIN code access offers security to help ensure that only qualified drivers are operating the equipment.

Optional features available for customization on the FCB series include sideshifting fork positioner, rear blue spotlight for pedestrian awareness, strobe light, clamp release switch and freezer packages for operation in temperatures as low as -31 degrees Fahrenheit.

The FCB series lift trucks carry the UniCarriers' best-in-class, two-year/unlimited hours limited warranty. View the informational video here: <http://bit.ly/UniCarriersYouTube>
