

CASE Rough Terrain Forklifts go Tier 4 Final with Maintenance-free Particulate Matter Catalyst

1 April 2015 by CASE Construction Equipment

Rated at 74 horsepower, the 586H provides 6,000 pounds of lift capacity with a 15-foot mast and 3,000 pounds of lift capacity with a 22-foot mast. The 74-horsepower 588H offers 8,000 pounds of lifting capacity with a 15-foot mast and 4,000 pounds lift capacity with a 22-foot mast.

Designed with 45-degree forward mast tilt and 15-degree backward mast tilt, along with optional load control technology, both forklifts are built to steadily handle and place all loads while providing a smooth ride for the operator. A narrow zero-tail swing design allows for operation in tight areas, and standard four-wheel drive performance ensures consistent power and traction regardless of environment. A dual-mast design, narrow operating console and low/sloped rear hood improve visibility to all areas of operation.

Both forklifts achieve Tier 4 Final certification with **CASE's** maintenance-free particulate matter catalyst - a combination of a diesel oxidation catalyst (DOC) and a high-efficiency flow-through filter that requires no fluids and no diesel particulate filter (DPF) maintenance/upkeep. This solution also offers five percent better fuel efficiency and faster response times than previous models.
