

CTE celebrates 12.000 aerial platforms produced announcing the launch of 2 new Traccess spiders

11 April 2012 by CTE

There is talk of numbers in **CTE** and in specific of important figures: since today **CTE** have been produced more than 12,000 branded platforms, including the brands B-Lift, Traccess and Zed. A highly desirable goal for the sector and can boast a European record.

To continue maintaining its leadership in the European market and beyond, in this 2012 CTE offers other 2 new models in the range of tracked aerial platforms Traccess, whose details will be announced in coming weeks. These developments follow the presentation of the new **ZED 21JH** at the Intermat exhibition in Paris, a model of articulated truck-mounted with capacity increased by 300 kg and jib, designed for the European market. All these developments are the result of the growing synergy between Rivoli Veronese and Bertinoro, the CTE technical dept and production sites of.

Going back over the history of **CTE**, it was in 1993 when the company introduced on the market the first aerial truck-mounted platform with a "Z" articulated and telescopic arm called "Z 16D", predecessor of the successful model Z 20 introduced in 1996. The Z 20 has established an important innovation on the truck-mounted License B platforms and has been the first of the various Z models of **CTE**, and copied by all the greatest manufacturers of aerial truck-mounted platforms. From 2009 the Z range has changed its name in **ZED** and actually we have 15 models that reach various heights from 14 to 32 meters.

The **TRACCESS** range, always manufactured in Rivoli Veronese by Seq uani, has 5 models of "spider" tracked platforms that reach working heights till 23 meters. The last recent models are the TRACCESS 230 and TRACCESS 170 E, this last one is an ecological model, electrical with lithium batteries able to guarantee about 5 hours of autonomous work hour.

Thanks to the acquisition of **BIZZOCCHI** in 2005, **CTE** has enriched the range of aerial truck-mounted telescopic and fire-fighting platforms **B-LIFT** and **B-FIRE**. B-LIFT offers a total of 14 models ranging from 15 to 23 m working height for the range Pro and Easy and from 39 to 61 m working height for the high performance High Range. **B-FIRE** offers 3 models from 33 to 55 m working height.

The wide range of CTE aerial truck-mounted and tracked platforms can be considered unique in that, in fact no manufacturer of aerial platforms can count on such a wide range of products.
