

Maschio Gaspardo: mulchers for every demand

11 May 2015 by Maschio Gaspardo

A positive spring for the Mulchers Range by Maschio Gaspardo: the straw choppers produced by the Italian Group are actually protagonists of an important market response from farms, contractors and green maintenance companies.

To answer the different demands of his customer, Maschio offers a wide range of mulchers suited for the requirements of all the users: from the compact and light machine for gardening and green area maintenance, to "heavy duty" straw choppers for the hardest agricultural processing. Every job requires the correct tools, and for this reason the choice of Maschio mulchers represents the choice of a quality product, but tailored on specific needs.

Quality of machines is guaranteed from first choice raw materials and suppliers.

The machines are developed with a particular focus on sturdiness: many features have been designed to reduce as low as possible the mechanical stress on most critical components. To reduce vibrations, power absorption and extend life of the machinery, every single rotor is electronically balanced.

Between the top range products, best sellers worldwide, we have to mention the rear mounted BARBI, the rear mounted with side mechanical offset **BRAVA**, the compact but sturdy **CORAZZA** and the folding "heavy duty" mulcher **GEMELLA**, with a working width of 6,2 meters.

Also the off set mulchers are very appreciated by markets, like **GIRAFFA**, first of serie of mulchers of different production but same concept, designer after the success of the "progenitor": **GIRAFFINA**, **GIRAFFETTA** e **GIRAFFONA**.

For an efficient management of crop residues after harvest, the straw choppers are the perfect choice: high clearance of the cutting chamber and wide rolling diameter rotor allow these machines to work on field of high speed with no clogging risk. In this range the top machine is **TORNADO**, a rear mounted chopper with a cutting chamber of 85 cm height.

Maschio produce also a range of reversible mulchers, with a symmetrical design of the three point hitch and a double front/rear 1000 rpm gearbox, which allow extremely quick changes in configuration: **BUFALO** is the best seller of the range, a heavy model front protected by chains and equipped with double counterblade.
