

New rotary mowers

22 April 2015 by TOBROCO-GIANT

GIANT has switched to better quality rotary mowers. The new mowers are light, compact and are ideal for maintaining your lawns and meadows. The high quality blades ensure a perfectly mowed lawn. The mowers are available in three different widths: 120 cm, 150 cm and 180 cm.

The rotary mower is powered by a hydraulic motor, which is mounted on top of the mower. This motor can process a maximum of 33 L/min. This makes the mower is currently only suitable for the GIANT D204SW till the GIANT D332SWT (X-TRA). Soon there will be new rotary mowers available for the other models. The two circulating blades are driven by two separated belt transmissions. On both transmissions is a tensioner to adjust the belt for correct tension. The height of the cutting unit is determined by 4 rotatable rubber wheels. On each wheel is a spacer mounted, which the height can be adjusted.

It is also possible to equip the rotary mower with a mulching kit. The mulching kit finely chopped the cut grass and spreads it over the lawn. So the natural cycle is complete. You save time and your garden is in full of health.
