

Telescopic-VFR machines take top technology award

28 May 2015 by McConnel

McConnel's state-of-the-art Telescopic-Variable Forward Reach (VFR) arm has picked up a prestigious international award from the organisers of Germany's influential Demopark Show.

Demopark's judges paid tribute to the new armset, presenting a silver medal for innovation to **McConnel's** Dutch and German distribution partner JJ Dabekausen.

The judges recognised the major comfort and safety benefits of Telescopic-VFR technology and paid tribute to the productivity boost the machines would deliver when coupled with **McConnel's** Easy Drive System which increases verge mowing speeds by up to 4.5 times.

Dabekausen general manager Jeroen Huijsmans said: "This award sends out the message to customers that when it comes to quality, performance and safety **McConnel** machines set the benchmark."

Dabekausen has marked the award with an intensive sales drive throughout Germany targeting 18,000 potential customers in local government, landscaping and contracting - promoting both VFR machines and smaller compact Power Arms .
