

Z140-160H: a range for high-performance indoor movement

10 June 2015 by Carer

A range of AC **forklift trucks** suitable for indoor applications, with high performance, good manoeuvrability, great flexibility and reduced costs.

Developed from the old Z150VLK model, the **Z140-160H range** maintains dimensions and capacity, allowing for the choice of the **maximum capacity between 14 and 16 tons**. The series features **compact-frame forklifts** (2000x4000 mm), suitable for **indoor applications** and for the movement of **bulky and heavy parts**, such as metal sheets, moulds and wire rods.

Instead of the CC engine of the old model, the new series of **forklifts** runs on AC to guarantee **enhanced acceleration performances**. Thermic performances have also been **enhanced through the enlargement of the hydraulic reservoir** and a better ventilation. The dimensions of the battery allow for **longer running times**.

The enhanced performances run along the traditional attention **Carer** gives to the economy of operations around the **forklift**: from the ease of access to the operator's cabin to the lateral extraction of the battery to allow an easier and quicker substitution.
