

# Introducing DINO 190 XTE – the new trailer with best-in-class basket capacity

8 July 2015 by Dinolift Oy

**Dinolift Oy** is introducing a new trailer-mounted DINO 190XTE work platform with an impressive 250kg basket capacity. The bigger basket also features an easy-entry gate for improved user comfort and access. Thanks to these improvements in ergonomics and basket capacity, you have more room to move and work around in. It also means better productivity as you can carry more equipment up with you and get the job done in one go.

The new XTE also comes equipped with standard DINO lift features, such as an efficient driving system and continuous rotation of the boom. The hydraulic basket rotation allows a 180° rotation as a standard feature. Thanks to spider-type outriggers, DINO 190XTE can be easily levelled even at 8°. Underneath the basket is an all-purpose lifting point enabling material lifting up to 250 kg. This also contributes to improved versatility of the machine, it is both an efficient work platform and a lifting aid for material lifting.

“Our customers have sent us a clear message: They are looking for new ways to improve productivity and bigger basket capacity and a bigger basket are two of those. We’ve also learned that trailer-mounted aerials are incredibly popular as long as the trailer is up to the job. That means we have to continuously listen to our customers and design and build DINO trailers that meet the operator’s specific needs, from top to bottom. It’s the best way to succeed in the highly competitive AWP market,” says Karin Nars, Director of sales, marketing and communication at **Dinolift**.
