

Sany Europe into empty container handlers in Europe

28 August 2015 by SANY Group

TOC Europe is the premier event for the container industry, a meeting place for actors from the maritime sector, from ports and terminals around the world. At the fair with over 160 stands, the exhibitors will present a wide range in the field of port and terminal technology. The congress cooperation is within the container value chain. New theme for this year is the "Port Centric Logistics Village", which deals with the hinterland of the ports.

Sany Europe showed the latest "built in Germany" Tier4f Empty Container Handler (ECH) at TOC CSC Europe in Rotterdam in June 2015. The new product has attracted big attention and interest from industry customers during the exhibition.

Germany based Sany Europe signed a contract with Van Doorn Group for six (+ one) 7-high stacking dedicated EC mast trucks.

Container logistics and depot operator Van Doorn has ordered six (+ one) machines in one go in a direct contract with Sany Europe. The contract is heavily focused on a service commitment from Sany in view of the fact that typically Van Doorn's ECHs in Rotterdam work 3000 hours per year.

The machines will be fitted with the Elme 582 double box attachment with double twistlocks to handle 2 over 6. In developing this new product line, Sany has paid particular attention to mast design and construction and mast cylinder positions to ensure stability at high stacking. The machines are fitted with a Stage IV Volvo 8-litre engine and a Kessler D81 drive axle.
