

BKL adds two 11LC90 to its fleet

23 September 2015 by COMANSA

German crane rental, sales and service company BKL Baukran Logistik GmbH, headquartered in Forstinning, near Munich, has recently joined two Linden Comansa 11LC90 Flat-Top tower cranes to its extensive rental fleet. These two cranes make it up to six new Linden Comansa tower cranes that have been acquired by BKL in the last year. BKL is Linden Comansa's dealer in Germany since 2011, and owns cranes in its rental fleet from series LC1100, LC1600 and LC2100, being the 11LC90 the smallest, and a 21LC750 with maximum load of 48 tonnes the largest.

BKL's 11LC90s have maximum load capacity of 6 tonnes and can be erected with maximum height of 47.1 metres on a 3.8 or 4.5-metre-wide folding cross base. With a maximum jib-length of 52.5 meters, these cranes have a jib-end load capacity of 1,200 kilos, and can load up to 1,320 kilos using the PowerLift system, which is standard in all Linden Comansa Flat-Top cranes.

The first of the 11LC90 cranes is already working since August on the construction of 5 storey office building in Regensburg, Bavaria. For this project, the crane has been erected with height under hook of 32.9 metres and jib-length of 50 metres, and can load up to 1.540 kilos at the jib-end with the PowerLift system.
