

# Brand new Optima TF Profi at Agritechnica 2015

28 September 2015 by Kverneland group

After presentation of trailed Optima with 6 or 8 rows in 2005, **Kverneland** Accord is proud to introduce the update of the Optima TFprofi at **Agritechnica** in November 2015.

Within the new TFprofi design all features that are required by a modern, professional user, who wants to work with high performance but small **tractor** requirements are integrated.

Equipped with 4 tires (optional) and due to an intelligent cylinder system, the TFprofi can follow the ground perfectly. The fan has been moved to the front and the coupling has changed to a cross-shaft.

At the back, the fertiliser hopper has a capacity of more than 2,000 litres. The hopper is placed on optional weigh cells and the metering system is driven by a hydraulic motor. This equipment not only increases the comfort of seeding but also improves the precision of dosing the fertiliser. Another important new feature is the pneumatic or hydraulic brake system, so transport speeds up to 40km/h are possible.

The new Optima TFprofi is the perfect choice for farmers and contractors who want to use at least a 100hp tractor in front of a 6m planter whilst maintaining the highest performance. The Optima TFprofi is equipped with the well-known Optima HD seeding row technology with e-drive II combined with a solid and reliable frame design.
