

New Holland Boomer™ Cab Tractors: Ready for Any Job in Any Weather

14 October 2015 by New Holland Agriculture

New Holland's Boomer™ 37/41/47 compact tractors (37 - 47 horsepower) are now available with a factory-installed cab for all-weather comfort and convenience.

"Whether you load mulch, mow the lawn, move snow, or do farm chores, New Holland's Boomer tractors have set the standard for efficiency, convenience, and ease of operation. Now, operators can work even more productively with the year-round comfort and protection of a cab," says Todd DeBock, Pro Work Tools Market Segment Leader.

Factory-installed climate-controlled cab for year-round comfort

The spacious, climate-controlled cab provides heat for cold-weather comfort and air-conditioning when operating in hot, humid weather. Additionally, side and rear-opening windows provide natural ventilation in less harsh climates.

Boomer compact tractors are designed with New Holland's signature sloped hood and without a muffler in the operator's line of sight. The cab features ample window space for excellent forward visibility as well as to the rear drawbar and linkage. The view is enhanced with a lighting package that illuminates both front and sides for greater productivity and safety when operating in the early or late hours of the day.

Convenience continues inside the cab, with an adjustable cloth seat with easy fore/aft movement and adjustable arm rests. Controls are conveniently located on the right fender for easy access. Other standard cab features include:

- Semi-flat platform
- Left and right hand doors
- Two front cab work lights
- Interior dome light
- Cup holder
- Front wiper/washer
- Radio ready (wiring, antenna, speakers)
- Two external work lights
- 12 volt power source

Choice of synchronized shuttle shift or hydrostatic transmissions

Boomer tractors are available with the choice of a three-range hydrostatic transmission or a synchronized shuttle shift. The 12 x12 synchronized shuttle shift (SSS) transmission (Boomer 37) and a 16 x16 SSS transmission (Boomer 41/47) makes it easy to find a speed for any task. The convenient shuttle lever located to the left of the steering wheel makes it easy to move between the synchronized forward and reverse gears. Simply clutch, then move the shuttle lever to change direction. The clutch-free, three-range hydrostatic transmission makes direction changes even easier with two pedals —one for forward and one for reverse. There's no clutching or hand shifting required.

Clean-running, fuel efficient Tier 4B compliant engines

Boomer tractors are powered by clean-running, fuel efficient Tier 4B compliant engines. Not only do these new engines comply with stringent Tier 4B emissions standards for decreased greenhouse gases and hydrocarbon pollution, they also operate more efficiently. The New Holland emissions treatment system uses a combination of internal Exhaust Gas Recirculation (EGR) to control Nitrogen Oxides (NOx) and a Diesel Oxidation Catalyst (DOC) with a Diesel Particulate Filter (DPF). Unlike other tractors that require extra fluids, operator input or that require you to stop operations, the New Holland system is completely automatic.

Boomer Guard5 five-year limited powertrain warranty

Peace of mind is standard with Boomer tractors. Boomer 37/41/47 models are backed by New Holland's Boomer Guard5 five-year limited powertrain warranty. It includes the two-year limited "bumper-to-bumper" warranty and adds three more years to powertrain components, for a total of up to five years. It's the best warranty in the industry.
