

Warwickshire Customer Chooses Twiga Flex 890T

27 November 2015 by Spearhead Machinery Ltd

Spearhead in conjunction with its dealer, Lister Wilder at Southam, has recently installed a Spearhead TWIGA FLEX 890T reach mower for their customer Mill Farm at Ashorne.

As well as undertaking general farm hedge cutting contracts, the Warwickshire based contractor also carries out hedge cutting and margin topping for the National Grid under power lines around Oxfordshire and Warwickshire.

Mill Farm chose the TWIGA FLEX 890T as they wanted a highly flexible reach mower to work with their reverse drive Fendt 828, cutting both forwards and backwards, to leave a finish that matches the professional services they provide.

The Twiga Flex series is the most prestigious and feature packed reach mower in the Spearhead range. With a multitude of high specification components the machine provides the most luxurious, high output reach mower combination on the market.

Featuring an arm-set that can be shifted through 140 degrees, the Twiga Flex series offers 50 degrees more forward travel than a traditional machine and can cut in every positional degree to allow the operator ultimate visibility. Coupled with the visionary 'rotorflex' head rotation system the 70 centimetre offset slew pivot allows the arm to be brought alongside the tractor as far forward as, and in line with the front linkage if desired by the simple adjustment of the machines slewing column.
