

Again, Urbaser reinforces its commitment with Piquersa

23 December 2015 by Piquersa

Urbaser's cleaning service contract in Vera has just incorporated two new BA-2300H sweepers.

There are many Spanish towns who enjoy clean streets thanks to the BA-2300H sweeper PIQUERSA but among them stands Vera.

Recently the service has been strengthened with the addition of two new BA-2300H units, fully trusting the cleanliness of its streets to PIQUERSA sweepers. The vacationers municipality had three other sweepers of the same model and recently has acquired two more units of BA-2300H, becoming the Spanish municipality with more units of the same model working together.

Responsible City Council highlighted the versatility of the BA-2300H to collect all kinds of waste. This is a fact especially important in a large city with several population centers where the influence of tourists is very high throughout the year. The high sweeping quality of BA-2300H has been improved with a new design of the sweeping implement, allowing greater dust control and better performance with fine sand.

These characteristics, along with easy maintenance and cost, make the BA-2300H a favorite sweeper for Cleaning Companies and municipalities. These advantages, along with the rest of PIQUERSA mechanical sweepers, are allowing PIQUERSA position itself as leaders in providing sweepers in several international markets.
