

CLS Selfdrive now hold largest Hydrema 922 Fleet in the North East

18 January 2016 by Hydrema Baumaschinen GmbH

CLS Selfdrive, a division of Cleveland Land Services have recently added 2 new 922F dump trucks to their ever expanding fleet making them the largest Hydrema 922 hire company in the North East.

CLS Selfdrive currently have the 922C, 922D and now the brand new 922F available for hire.

The new machines will firstly be used by Cleveland Land Services' sports division; CLS Sports, before later being let out for hire this spring.

CLS Sports are currently using the machines to construct two full size synthetic hockey pitches and one natural rugby pitch at Oundle School, Peterborough.

Stephen Miller, Contract Manager for CLS Sports said 'The new 992F dump trucks are perfectly suited to sports construction due to their low ground pressure and reliability. They are a great addition to our sports construction fleet, matching all our other low ground pressure machinery. The tier 4 final engines will also allow us to use the trucks in low emission zones such as London.'
