

FALCON SPIDER no. 4 to AH Lift Denmark

25 February 2016 by FALCON LIFTS

TCA LIFT is proud to announce that another FALCON SPIDER has been sold and recently handed over to the Danish rental company AH Lift in Copenhagen.

This will be the 4th FALCON SPIDER FS330Z – z-boom lift - delivered to AH Lift.

AH Lift was one of the first rental companies to buy the first edition of FALCON SPIDER FS320Z with the incredible long outreach, and up- and over function. “We have been very glad to have the FALCON Z-booms in our fleet, as it is a very popular machine. Now the time has come to upgrade the first FALCONS, and with the new features we were not in doubt that we wanted the newest edition of the FALCON SPIDER FS330Z”, the owner of AH Lift, Finn Aaberg says.

TCA LIFT has added new features to the FS330Z model. 33 meters working height and 19 meters reach is unmatched by similar machines. New remote control system for easy and safe use, and enhanced electric engine with double battery package. This is, for rental companies, an important issue as this means more work in less time. Also the new remote control has made the FALCON very popular, as it is easy to manoeuvre also for unexperienced lift users.

At last but not the least, the new FALCON Service Tool was an important issue to AH Lift. The service tool ensures fast online service in case of break down. TCA technicians will be able to troubleshoot on line via a computer connected to the FALCON SPIDER, and immediate support the lift user how to solve the problem.

“When unexperienced users are working with lifts break downs are mostly due to operator mistakes. With the FALCON Service Tool the user is instructed how to react, and often within short time he will be working again”, sales manager Brian Falck Schmidt continues, “ this system is now standard on all FALCONS.”
