

Qimarox introduces extra powerful lift for pallets up to 2,000 kg

1 April 2016 by Qimarox

Vertical transport systems with low purchase and maintenance costs

Qimarox has extended its range of material handling components with the Prorunner mk10, a product lift for pallets up to 2,000 kg. The Prorunner mk10 allows companies to transport up to sixty pallets per hour, ten metres upwards. Qimarox will talk about this product lift at Modex, the popular international trade fair, taking place in Atlanta (USA), from 4 to 7 April, 2016. The theme of the fair is very much in line with the philosophy of Qimarox: 'being innovative – shaping change'.

This year, Modex is responding to the ever-changing market, which requires flexible and innovative logistics processes. To survive these days, companies need to continuously monitor and optimise their processes. The trick is to choose exactly those products and systems that offer your organisation the most added value from the overwhelming range on offer today.

Qimarox is responding to this trend with its modular, standardised components for material handling systems. These components excel in versatility and flexibility and are easy to integrate into any system by local system integrators. Thanks to the continuous development of the components, Qimarox has managed to reduce the cost of purchase, installation, integration, use and maintenance to a minimum.

Pallets up to 2,000 kg

An example is the Qimarox Prorunner mk10, which is based on the design of the successful Prorunner mk9 pallet lift. The most important difference is that the new Prorunner mk10 features four instead of two columns, which allows this very robust lift to effortlessly lift loads of up to 2,000kg.

The Prorunner mk10 can easily bridge any difference in height between 0.40 and 10 metres. Even at a height difference of 10 metres, the lift can still easily transport sixty pallets per hour with ease. The Prorunner mk10 is equipped with a lifting platform of 1200 x 1200 mm as standard, so that it can handle not only euro pallets, but also product carriers of different sizes such as block pallets.

Highlight

The Prorunner mk5 is literally and figuratively the highlight of the fair. This elegant product lift works according to the time-honoured paternoster principle, which results in a versatile vertical transport system with a capacity of 2,000 products per hour. Because a single elevator system can be used for both upward and downward product flows, the Prorunner mk5 is ideal for vertical sorting, or as a component in storage and order picking systems.

The standard model of this maintenance friendly and sophisticated product elevator is available for the fixed price of only \$ 9,250 including infeed and outfeed conveyors.

Packaging systems

Besides product and pallet lifts, Qimarox also develops and supplies components for packaging systems. The Highrunner mk7 is an innovative palletiser, which is capable of quickly and efficiently processing products of different shapes and sizes into stable pallets. Qimarox also supplies standardised, modular components for wrapping pallets in foil. New in this range is a machine for wrapping pallets in stretch wraps.

All components are installed, integrated and maintained by trained system partners, so you are assured of a local specialist who speaks your language and may already be familiar with your organisation and processes.

More information? Come visit our stand at Modex!

Modex has quickly grown into one of the most important logistics fairs. From 4 until 7 March (Monday to Thursday), 850 exhibitors will be presenting their products and services.

Qimarox can be found at the Modex at stand No. 2469. For more information, please visit www.modexshow.com or visit www.qimarox.com for a free entrance ticket.
