

VERSALIFT and Time Danmark: Tailor made partners and products

7 June 2016 by Ruthmann

VERSALIFT® access platforms have been part of the RUTHMANN product line since 2011. The ever-growing success story can be attributed to excellent VERSALIFT®-products, our optimum, comprehensive service, and A1 collaboration with Time Danmark A/S. Our Danish partner is responsible for the production and distribution of VERSALIFT®-products across Europe.

We work very closely with our Danish colleagues. In Scandinavia, Time Danmark A/S is responsible for marketing our complete STEIGER® product line with working heights that range from 11 – 72 m.

The Sales and Service meeting in Farso (seen here on the left) was also the perfect opportunity for us to present our 7.49 t star – the STEIGER® T 330 – as well as our brand new highflex STEIGER® T 570 HF, and top-selling 3.5 t TBR 220 and TB 220.2. models.

In addition to the popular van-mounted access platforms, the relatively new VTX-240 is now also part of VERSALIFT's top-notch product range.

This rear-mounted, 3.5 t chassis access platform features a 24 m working height and 12.5 m lateral outreach. Because of its compact overall dimensions – height of just 2.28 m and length of only 6.92 m – the VTX-240 is absolutely perfect for cramped, inner-city assignments.

With its generous 200 kg basket load capacity, this truck-mounted access platform fulfills all important parameters for roofing contractors, painters, window/façade cleaners, etc. to carry out their daily tasks with utmost efficiency. Equipment rental companies will also find this truck-mounted access platform extremely appealing.
