

A mini backhoe loader PB 130 for energy and antiseismic intervention thanks to Energybo Srl

15 June 2016 by Palazzani Industrie S.p.A.

Energybo Srl is an Northern Italian Company dedicated to **energy saving promotion** and sustainability, as well as **antiseismic structure modifications**.

To better face every need this activity requires, but most of all to offer its customers a complete solution at a reasonable cost, Energybo Srl purchased one Palazzani Mini **Backhoe Loader PB 130**.

PB 130 is used mainly to do excavations for the structural reinforcements or to create conduit passages for photovoltaic systems.

<<we choose Palazzani PB 130 considering the good balance offered by the machine>> says Mr. Marco Borrini, owner of the Company. The performances of PB 130 are well known, **stowed dimensions** and **high performances, versatility to use various equipments**.

<<I have to say that my impressions are very positive with this product. We suggest it to every constructions works where precision is required, considering the fast and good movements the machine does in narrow spaces>> says Mr. Borrini.
