

Schwing signed order of 10 million yuan

8 July 2016 by XCMG

Recently, good news come from the XCMG Schwing new industry sales department that XCMG's environmental protection and recycling machines, the upper reaches of concrete machinery has quickly taken the domestic sand manufacturing market since the launch with the features of renewable and environmental protection in the crushing and sieving of construction waste and mining materials. Schwing has successfully signed sales agreement on environmental protection and recycling machines valuing nearly 10 million Yuan.

In 2015, a company in Huizhou purchased three XCMG crushing and sieving machines at one time, for the processing of construction waste and mining materials. Half a year later, the customer gave a high degree of praise on the reliability of products and completeness of service, and actively recommended Schwing's customized products and service to other customers, making Schwing win the favor of new customers. This time, a PUF1214 crawler mobile crushing station and a MSP1561 crawler mobile sieving station are sold.

In recent years, Schwing gradually increase R&D investment in environmental protection and recycling machines, and has successfully developed 20 products of "two series and one core" system, including fixed sand production line, mobile production line and main engine, to meet the customers' various demands of sand production. At the same time, tailored solutions are provided according to market and customer needs, realizing truly personalized service.
