

EC-Oil™ – more efficient tool changes

14 April 2016 by Engcon

engcon has developed EC-Oil™. A fully hydraulic system that makes it possible to automatically connect hydraulic tools and accessories from the operator's seat without leaving the cab.

How?

The efficient system works like this:

1. EC-Oil is connected directly on the Q-Safe quick hitch
2. EC-Oil provides the selected tool with hydraulics, electricity and lubrication
3. EC-Oil makes it possible to connect hydraulic tools automatically without leaving the driver's seat

Why EC-Oil?

- Automatic hydraulic and electricity connection
- Automatic coupling of central lubrication
- Switching tools in seconds
- The operator changes mechanical and hydraulic tools from his/her place in the cab
- Handles the connection of pressurised tools at full system pressure
- Suitable for demanding environments
- Long lifetime
- Internal connections
- Market's most durable couplings
- Low built-in measurement

- Low weight

Safety provides extra profitability

The German trade association BG Bau is working hard to prevent injuries at the workplace. As a part of this work, discounts are being provided on safe quick hitches. engcon's Q-Safe is included in this category, maximising the contractor's safety at the same time as minimising the cost. The discount is up to 50 per cent of the cost, or a maximum of EUR 1,800 per unit. In total, a company can get up to EUR 20,000 in discounts per year.
