

Bobcat presents powerful compact machines at GaLaBau

11 August 2016 by Bobcat

Doosan Bobcat EMEA will be showing its extensive range of Bobcat compact machines and attachments for horticulture and landscaping on Stand 336 in Hall 07 at GaLaBau in Nuremberg from 14th to 17th September 2016.

Horticulture and landscaping companies can benefit from more than 70 different types of attachments for Bobcat compact machines. In fact, Bobcat has a machine-attachment solution for almost any application. To illustrate this, the company will be showing a selection of special attachments such as graders, augers and hydraulic clamps for horticulture and landscaping.

Bobcat excavators

Compact excavators from Bobcat will be the centre of attention at GaLaBau, especially the E10 electric model (on show in the demo area). The fully functional prototype of this entirely electrically driven mini-excavator with an operating weight of around one tonne, attracted a lot of attention at its premiere at Bauma 2016. It is the electric, emission-free version of the extremely successful Bobcat E10 mini-excavator, one of the most popular models in the Bobcat compact excavator range.

Also on show at GaLaBau are the E17, E19 and E20 compact excavators from Bobcat the company's current generation of 1-2 t compact excavators. These versatile excavators offer a superb combination of high power, easy operation, smooth hydraulics and short cycle times, as well as a roomy and comfortable driver space, robustness and superb access for maintenance and servicing.

Together with the E26, E35, E50, E55 (demo ground) and the E85, the selection on show provides a broad view of the different sizes of machine from Bobcat.

Bobcat compact wheeled and tracked loaders

The S100 has long been a proven and popular compact loader, which is ideally suited to applications in horticulture and landscaping. With an operating weight of just 1800 kg (including bucket), the S100 compact loader provides a rated operating capacity of 457 kg and a dumping load of 915 kg. Thanks to its compact dimensions – a height of 1878 mm, length of 2262 mm (excluding attachments) and a width of 1167 mm - the S100 is also easy to manoeuvre in tight spaces.

Two compact track loaders, the T450 and T770, are also being exhibited – these are extremely powerful machines that deliver superb traction thanks to their durable track systems.

The S450, which will be running on the demo ground, and the T650, which will be equipped with a laser grader, will be showing live just how powerful these machines are despite their compact dimensions.

The display of machines on show at GaLaBau will be completed by the Bobcat TL358 telescopic loader.
