

Wide Range of Doosan Heavy Equipment at Conexpo

26 January 2017 by Doosan

Doosan Construction Equipment will display a variety of machines in two booths – G4476 and G4876 – located in the Gold Lot at the Las Vegas Convention Center during the CONEXPO-CON/AGG Exhibition in Las Vegas from 7-11 March 2017.

Durable, reliable and productive Doosan earthmoving equipment designed for general construction contractors will be on display. Doosan products on show will include crawler and wheeled excavators, wheel loaders and articulated dump trucks (ADTs), as well as a variety of attachments for use with excavators and wheel loaders.

Excavators - Crawler and Wheeled Models

Doosan offers a full line of dependable and durable excavators from 14 tonne and above, including 15 crawler excavator models and six wheeled excavator models. These excavators range from the 14 tonne DX140LC-5 to the largest model, the 54 tonne DX530LC-5, to best match customer needs. Each excavator model provides operators with optimal performance, reliability, fuel efficiency and simple maintenance. Doosan offers two crawler models and a wheeled excavator designed with reduced tail swing for operation on confined jobsites.

The wheeled excavators are manufactured with rubber tyres, making them a popular choice when working on improved surfaces such as finished concrete or asphalt, where the excavators can operate with minimal ground disturbance and are able to traverse job sites more quickly.

Wheel Loaders

Doosan wheel loaders excel in digging, loading and lifting applications. Each of the 10 models offers outstanding performance, reliability, fuel efficiency, operator comfort and ease of serviceability. In addition, many models are available with a high-lift configuration for extra reach and dump height.

Doosan offers two lift-arm designs: A Z-bar loader linkage and a parallel lift arm. Two tool carrier models – the DL200TC-5 and DL250TC-5 – are designed with the parallel lift arm to provide added versatility and multiple attachment capabilities. An optional quick coupler makes changing attachments a fast and easy operation.

Articulated Dump Trucks

Moving more material in less time is just one of the many benefits of the latest generation Doosan ADTs. The two models — the DA30-5 and DA40-5 — offer excellent load capacities coupled with superior power and traction. Each machine is designed to maintain tyre contact with the ground at all times due to the machine's tandem rear bogie, front-mounted turning ring, sloping rear frame and front suspension. Doosan ADTs offer permanent, six-wheel drive that provides excellent traction in all applications.

With more than 40 years of experience manufacturing ADTs, the trucks are among the most fuel-efficient off-road trucks in the industry, making them ideal to work on construction sites, road projects and mass excavation, as well as mining and quarry environments.

Doosan Machines on Display

Listed below are the Doosan machines scheduled to be on display during CONEXPO:

- DA40-5 articulated dump truck
- DL200-5 wheel loader
- DL220-5 wheel loader
- DL250TC-5 wheel loader
- DL420-5 wheel loader
- DL550-5 wheel loader
- DX140LCR-5 crawler excavator
- DX225LC-5 crawler excavator
- DX300SLR-5 crawler excavator
- DX350LC-5 crawler excavator
- DX490LC-5 crawler excavator
- DX190W-5 wheeled excavator
