

SILOKING Data wins Best Product Award at AgroFarm 2017

9 February 2017 by SILOKING Mayer Maschinenbaugesellschaft GmbH

Sixth award in succession since 2010 for a product by Mayer Maschinenbaugesellschaft mbH in Moscow

SILOKING Data, a radio-controlled weighing, control and documentation system, convinced the jury this year. The awards ceremony took place in Moscow on February 7, in the course of the official opening ceremony of AgroFarm Exhibition, which has developed into the most important exhibition for animal husbandry and animal breeding, with more than 300 exhibitors from 27 countries. The award is arranged by the AgroFarm organizers. Technical assessment is made by an independent commission of experts.

Feed precision is of great importance

“The AgroFarm Best Product Award goes to products that are particularly suited for animal production in Russia”, Anna Perederii, Export Manager at SILOKING, said.

The award-winning product is a combination of radio-controlled weighing system and hydraulic feed mixer functions with the new Feeding Management Software free of charge, for individual organization of rations. Recipes are transferred to the terminal in the loading vehicle wireless via a local radio network. Loading precision and ease of use are increased.

“All of this saves time and costs in feeding”, Anna Perederii summarizes.

The Feeding Management Software allows farmers to create the feed components, animal groups as well as loading and unloading programs on the PC. And it is also possible to continuously evaluate data regarding feed consumption, costs and concentrate efficiency.

“This repeated award further increases the Russian farmers’ confidence in our machines”, Alexander Knippel, General Manager of SILOKING Russia, said.

The company is exhibitor at this year’s AgroFarm, represented through twelve dealers from all parts of Russia.
