

Doosan pallet fork attachment overview

16 March 2017 by Doosan

For lifting, carrying, and placing materials, Doosan wheel loader customers can easily connect a pallet fork to the machine. Doosan pallet fork attachments are approved for use with Doosan DL200-5 through DL500-5 wheel loaders.

Features of Doosan pallet fork attachments include:

- **Heavy duty construction:** Designed specifically for use with Doosan wheel loaders, the pallet fork is approved for load ratings beyond wheel loader lift capacities.
- **Open carriage:** Operators have good visibility to palletized material or pipes for picking up and placing it.
- **Carriage widths and tine lengths:** A variety of carriage widths and fork (tine) lengths are available, depending on the Doosan wheel loader model.
 - Carriage widths: 62 or 106 inches
 - Fork lengths: 48, 60, or 72 inches
- **Manual adjustable tines:** Operators can adjust forks (tines) to the required width, depending on the material that needs to be moved.
- **Quick coupler mounts:** Owners can quickly attach or de-tach a pallet fork attachment and connect it to another Doosan wheel loader.
