

Agritechnica is almost here

7 November 2017 by HARDI

And we look forward to show you all of our latest new products at Hall 09, Stand B15 from November 12.

The **RUBICON** establishes a new class in self-propelled sprayers, designed to meet the productivity demands of large scale farmers. The seamless integration of capacity and width delivers the highest performance to conquer everyday spraying tasks with ease and ahead of time.

Longer spraying days and nights and higher spraying speeds place heavier demands on comfort and easy operation. HARDI renews the self-propelled sprayer **ALPHA** family to 3500 and 4100 l with ambitious specifications in terms of better performance, reliability and driving comfort and adds higher tank volume up to 5100 l.

The **HELLIOS III** sprayer are compact and versatile. The machines are very easy to handle and offer outstanding ergonomics. The machines feature a 3000 l main tank and aluminium booms of up to 38 m width and are thus a very cost efficient solution for treating small to medium sized plots.

Get up close to our new centerpart that is featured on our **DELTA FORCE** boom. See AutoTerrain with AntiYaw, AutoHeight, Negative Tilt and more in action, like you never seen it before!

With AutoSelect, the driver can change between 2 nozzles or use both at the same time, either automatically or manually. At Agritechnica 2017 you will be in control of the spray job.
