

# Cargotec's Kalmar provides XVELA collaborative stowage solution to Ocean Network Express

8 November 2017 by Cargotec

XVELA, part of Kalmar business area within Cargotec, has signed a contract with Ocean Network Express Pte. Ltd. ("ONE") for a collaborative stowage solution. The order has been booked into Cargotec's 2017 fourth quarter order intake. It is a significant step in realising the Cargotec and Kalmar strategy to grow in software business.

XVELA operates as an independent entity inside Navis, the leading provider of software and services for terminal operators and ocean carriers. XVELA provides a transformative, cloud-based collaboration platform that drives transparency, efficiency and profitability to a network of ocean carriers and terminal operators. It enables terminals, carriers and operational partners to work together to better communicate, coordinate and synchronise their operations.

"We endeavour to achieve new levels of efficiency and deliver a new standard of service to our customers," said an executive from Ocean Network Express. "We believe that XVELA's innovative collaborative solution will enable us to work more effectively with our operational partners around the world in order to attain these goals."

With the ONE service scheduled to begin April 1, 2018, ONE stowage planners will migrate to the full XVELA cloud-based solution.
