

Latest addition to the LEADER range: TÜV certification

26 November 2017 by KUHN

The KUHN LEADER single-wheel, semi-mounted plough range has been awarded TÜV certification allowing it to travel legally at up to 30 kph on German roads. LEADER ploughs represent a good balance between work rate and user comfort. Available in 6 to 8 bodies traction bolt or non-stop- hydraulic safety versions, they meet the requirements of private farms, agricultural contractors and equipment-sharing cooperatives equipped with tractors from 135 to 360 hp.

The LEADER range meets each user's needs for quality work whatever the conditions.

1. No time wasted:

- TÜV certification now permits the machine to travel at up to 30 kph on the road. That allows the optimum work rate to be achieved by spending less time on the road and more time in the field.

2. Quick and easy to put to work thanks to:

- Two available working width systems (MULTI or VARI)
- The kit for working outside the furrow, which is easy to retract in order to revert to furrow mode when conditions become difficult.
- The ability to hitch to the same front axle of tractors with different hitching systems: Cat. 3, 4N, 4, K 700 and Quick Coupler cat. 3.
- The VARIBAR for adapting the NSH system pressure from the cab.

3. Significant level of user comfort:

- A large diameter wheel, equipped with hydraulic suspension, reduces the need for traction and improves plough stability.
