

Optimized hand-held device BvL's for feed management system V-DAIRY Feeder

29 November 2017 by BvL Group

Improved ease-of-use and boosted performance

Available immediately, BvL's feed management system V-DAIRY Feeder now comes with a new and improved hand-held device. The latest incarnation of the device affords customers a host of additional advantages, explains Ms. Göhring, the product manager responsible for the feed management system at BvL.

Boasting a bright and hard-wearing display with integrated touchscreen, the device is ideal for indoor and outdoor use alike. The hand-held device remains perfectly usable even when exposed to such extreme weather conditions as heavy rain or glaring sunshine. The outstanding characteristics of its design have even earned the device certification according to US military standard MIL-STD-810G. Accepted as the gold standard around the globe, International Protection Codes indicate the suitability for use of electric equipment under certain operating conditions. The optimized hand-held device complementing the V-DAIRY Feeder system has achieved IP65 certification. This signifies that the device offers total protection from dust ingress and low pressure water jets from any direction. Thanks to its rugged design and exceptional durability combined with low weight, this hand-held device is tailored specifically to the needs of any farming business. Better still, the device's 3G and WiFi reception is strong enough to never drop the signal. "This hand-held device allows us to take our V-DAIRY Feeder system to a whole new level of user friendliness", Göhring continues.
