

The Socage challenge to the weight continues

4 May 2018 by SOCAGE

During INTERMAT 2018 Socage will present some really interesting news. First of all Socage is going to show its top range **75TJJ** with an important novelty concerning the stabilization, which will no longer be classic but "flag shape". Change that makes possible to reduce the weight and increase the performance.

Second in Paris Socage will launch its new telescopic range.

The new telescopic Socage aerial platforms range consist of a **16T**, stabilized H + H, an 18T available in the H + H version and in the ME + H version, the **20T** and the **23 T** both with ME + H stabilization. During the INTERMAT will be showed the **18T** model with H+H stabilization.

The entire new telescopic range is characterized by the ultra light chassis. This type of chassis is the continuous of the collaboration between Socage and Welser for the creation of SPP (year 2016), the same principle will be applied for the production of this kind of chassis. All the Serie E, both standard and extreme, are mounted with this technology.

At INTERMAT Socage will show also one of its platform on van: the **15VTJ**. The van aerial platform are very appreciated on the French market because are often used from whom need to bring the work tools and working in height. On the French market this is one of the Socage best seller aerial platforms.

INTERMAT 2018 will be an opportunity to introduce the new range of crawler platforms to the international market, in fact, Socage will present the new **S18** as the first in a wider line of tracks.

In conclusion, the innovations that Socage is launching on the market for this 2018 are really many and varied able to respond to the different needs of international markets as well as the Italian one.
