

Joint cooperation between Continental and Toyota Material Handling

7 June 2018 by Continental

- Toyota Traigo80 electric forklift standard fitted with Continental solid tire SC20+
- Tire combines mileage with low energy consumption making it the perfect choice for electric forklifts

Continental and Toyota Material Handling join forces: All Traigo80 forklift trucks ordered since April 1, 2018 come fitted with the Continental solid tire SC20+ as standard. "The decision to change the tire came in response to feedback from the market requesting more resilient and high durable tires for the electric counterbalance range," says Giorgio Polonio, General Manager Toyota Material Handling Manufacturing Italy. "This applies in particular to the Traigo80 range as it is meant for more intensive applications indoors as well as outdoors".

SC20+

The service and maintenance costs as well as the energy consumption of forklift trucks equipped with SC20+ are lower. "The SC20+ merges the best of two worlds: Not only does it offer durability and mileage, it also saves valuable energy even on abrasive grounds," says Julian Alexander, Product Line Manager Material Handling at Continental. Released just in January, the tire comes with a new compound that combines high mileage with low rolling resistance. It is hard-wearing and puncture resistant and particularly shines in highly intensive application indoors as well as outdoors on uneven surfaces such as paving slabs or cobble stone pavement.
