

CIFA and Blend join forces to present a new product at Bauma 2019: EasyFloor

24 April 2019 by Cifa

CIFA's first mobile flooring plant, manufactured in collaboration with Blend, will be showcased at Blend's stand (external area FS.907/9).

CIFA, the leading company in the production of machinery and solutions for the concrete industry, and Blend, the manufacturer of mobile mixing plants for conglomerates, have joined forces to create a new product: Easyfloor. A mobile flooring plant installed on a chassis and equipped with a pumping unit available in two versions (piston and air).

This agreement stems from the synergy between the two companies, who have joined forces to manufacture a Blend machine carrying CIFA's pumping unit and exploit its international sales network. As a matter of fact, EasyFloor will be distributed and sold with CIFA's brand. EasyFloor is the latest addition to CIFA's range of products.

EasyFloor is mounted on a 4-axis chassis and is the unique system that produces screeds, semi-wet screed, self-levellers, spritzes (dry and wet), and concrete. It ensures continuous operation and the utmost precision directly at the jobsite.
