

NOW THE DESERT NEVER STOP SOCAGE

17 September 2013 by SOCAGE

Also Socage will go to the desert without problems, because Tecnolibia, the official Socage dealer in Libya, finished a special installation on Toyota pick-up.

After the purchase of 90 unities of Socage A314, Tecnolybia design this new project for the geographycal conformation.

The A off-road aerial platforms are characterized by compact installations on 4x4 pick-up vehicles. The Socage off-road aerial platforms can work where normal models could not even get in.

Able of a maximum working height of 13.5 m and it has got a safe working load (SWL) of 225 kg (2 operators + tools).

A314 on ISUZU is able to 90°+90° basket rotation to improve the outreach to 7.2m and the addition of 2 more outriggers for a better stability on rough terrain. Finally new ground controls with four individual levers allow the operator to deploy the outriggers and stabilize the platform even in the most difficult environment.

The A314 on Isuzu is able to face downhill, on both sides, up to 10° inclination, a feature difficult to find on another articulated aerial platform.
