

RH forklift line: high performances and zero emissions

11 May 2020 by Raniero

RH50 - 60 - 70 offer high performances and zero emissions. Line choice for reliability demonstrated when subjected to heavy loads and continuous work on multiple shifts. Flexibility in the use in indoor and outdoor areas, with different types of flooring.

A range that is developed for 5, 6 and 7 ton capacities.

A line suitable for different operational applications: for paper, steel and aluminium, timber, general manufacturing, heavy logistics, concrete and bricks, recycling, container loading, automotive, beverages.

Currently at a sawmill there are RH60 forklifts delivered between 2005 and 2006. They have already collected over 30,000 hours with short downtimes related only to routine maintenance activities or minor repairs.

Our strength is the configuration according to your needs. We can configure our trucks according to size limits and operating autonomy.

From the point of view of limits related to aisle spaces, door heights and the need to work inside containers, we can offer you the configurations:

- CO - Compact: reduced forklift length
- C- Container friendly: lowered forklift truck to operate inside containers

With regard to operational autonomy and the type of application we may evaluate the following two options:

- 80V Battery tension: operating autonomy up to 8 hours with a single recharge
- 96V battery tension: ideal for the use of special equipment such as paper clamps and/or masts with high lifts. For prolonged and consecutive use over a period of time longer than 10 hours.
- Batteries
 - Lead acid: 80V 930Ah/1085Ah and 96V 1085Ah
 - Lithium LiFeP04 80V 800Ah - 96V 800Ah

The SBE system is the ideal version for those who need to use a spare battery. It allows the quick exchange of the battery located under the cab through another forklift or a pallet truck with 2500 kg capacity.

This line is appreciated by our customers for the easy access thanks to the low seat. The wide visibility on all four sides maximizes operational safety for operators.

A wide range of accessories and instrumentation can be added to each individual truck to suit your operational needs, personal preferences and safety regulations within the workplace.

Every single truck may be monitored and configured directly from remote, sitting comfortably in your office thanks to our **Raniero** truck software.
