

BEZARES, S.A. FRM Hydraulic Motors now available in SAE, DIN and BSP

10 July 2020 by Anmopyc

The well-known FRM motors from Bezares, during their more than 10 years of existence, have always proven to offer high performance with small dimensions, similar to FR pumps.

And they have never stopped evolving. In their current versions they have incorporated new improvements such as the change of direction of rotation, being bi-directional and offering any possible combination between four sizes from 40cc / rev to 110cc / rev.

The latest development in this family are its new versions in the SAE B Z13 (FRM 40 and 60), SAE BB Z15 (FRM 80 and 110), DIN Z8 and BSP threads, to maximize compatibility.

The **MR**, **FR**, **FR2** and **FRM** families of pumps and motors will continue to evolve to adapt to the most demanding applications and systems, incorporating the latest technologies and market trends and always maintaining the quality expected from Bezares products.
