

Introducing Intercomp TS30™ Touchscreen CPU

21 July 2020 by Intercomp

Intercomp is proud to introduce the TS30™ Touchscreen CPU to its line of industry-leading portable vehicle weighing equipment. This modern scale CPU provides an intuitive, user-friendly interface and works in static or Weigh-In-Motion (WIM) applications, increasing the efficiency of nearly any vehicle weighing operation. The indicator communicates with up to 12 scales within 300 ft, line-of-sight, using our reliable RFX® Wireless Weighing Technology. This allows users to control all functions of each scale pad from a safe distance.

Two USB and Ethernet ports provide the ability to show weight data on a scoreboard display or transfer/download data for long-term digital storage. The CPU's built-in memory also provides store and recall capabilities for more than 2 million weight records. In addition, physical weigh tickets are produced using the unit's built-in thermal printer.

Additional Benefits:

- Easy-to-Navigate Menus Using Color Touchscreen
- One-Touch Switches CPU Between Static and WIM Modes
- Compatible with all Intercomp RFX®-Enabled Scales
- CPU Software can be Customized for Specific Applications
