

Antoniolli and CTE: an agreement for 30 truck-mounted platforms

29 November 2013 by CTE

The Northern Italy hirer makes a purchase agreement for CTE truck-mounted articulated platforms and GENIE self-propelled platforms

Antoniolli Srl is a company in business for sixty years, specialized in the production of metal containers, metal construction for industrial and rental/sale of cranes and aerial platforms.

He has recently implemented an expansion in the country starting from the headquarters of Pordenone to get up at Marche and Emilia Romagna regions, with the opening of new hire points.

Customer of **CTE** since 2009, Antoniolli has signed a big commercial agreement for the delivery of 30 aerial platforms. The order provides the delivery of 21 truck-mounted articulated platforms **ZED 20.2 H** and 9 second-hand self-propelled platforms **Genie**.

"We have decided to open a new collaboration with Emilia and Marche regions (central Italy), because we believe that these are places interesting for the market" says Mr Sannio Antoniolli, holder of **Antoniolli Srl**. "Moreover, we wanted to further consolidate the partnership with **CTE**, manufacturer that works with us since many years. The 90% of our truck-mounted fleet comes from **CTE**, so with this new purchase we continue to achieve the goal to standardize our fleet.

We have chosen platforms with 20 m of working height because they are the most requested in the rental market, and also for the success of H stabilization. We will wait for the market give us the satisfaction we hope".

ZED 20.2 H is the top model of **CTE**: launched on the market last year, it reaches 20 m of working height, 9,2 m of working outreach and a maximum capacity in the basket of 300 kg. This is a "H" shape stabilisation with drive rods: a **CTE** patented system that guarantees the exit of the beam, and consequently of the outrigger, in one movement, without the help of jacks and cylinders. It allows you to get closer to the sidewalks and to avoid the sliding of the outriggers. It is perfect for all situations where you should work in tight and narrow spaces, like Christmas lightings, public lighting, green maintenance. The H stabilization also guarantees the exit of the stabilizer to allow the overcoming of obstacles (eg. sidewalks) up to 220 mm.
