New snow blades & spreaders for John Deere Gators

3 September 2021 by John Deere

John Deere and Douglas Dynamics, the parent company of US brands such as Western, Fisher and SnowEx, have entered into an allied partnership agreement for the Western Products range of snow and ice removal solutions for utility vehicles.

Located in Milwaukee, Wisconsin, Western Products is the leading manufacturer of snow and ice control products. It offers a variety of front-mounted blades plus hopper and tailgate-mounted sand and salt spreaders, along with a wide selection of performance-enhancing snow plough and spreader accessories and parts.

All Western products can be installed quickly and easily on John Deere's range of Gator utility vehicles. There is a choice of 1.82m (72in) straight and V-blade snow plough models with hydraulic or winch lift, and each

comes with replaceable cutting edges and plough markers. The hydraulic blades feature an in-cab joystick control for lifting and angling, and optional accessories include plough shoes, rubber deflectors or poly cutting edges.

Alongside the snow blades, the Western stainless steel spreaders feature variable material flow rates with in-cab speed controls. These include a 340kg capacity hopper unit with a spread width of up to 9m, and two drop spreaders with capacities of 90 or 217kg, fitted plastic covers and adjustable spread pattern widths of 76, 83 or 91cm.
