Huge second life operation between Haulotte Iberica and Mainsa Plataformas

19 July 2022 by Haulotte

MAINSA Plataformas, a leading Spanish rental company based in Heras, Cantabria, works with **Haulotte Iberica** to give a second life to its equipment. The refurbishment has started with 3 machines, and will continue in the coming months with more Haulotte models.

Spanish customers rely on Haulotte's expertise

The Haulotte Spanish subsidiary started their second life project in May with a **H12 SD** scissor lift. Another **H12 SX** scissor and one **H23 TPX** telescopic boom already recovered their full potential. The main

modifications concerned the restoration of some core mechanical parts, such as rings, axes, telescopic boom chains and pads. "Our refurbishment solutions increase the machines' lifespan significantly. They enhance the equipment's safety and improve their residual value", says Luis Perez Santos, Service Manager at Haulotte Iberica. To erase the signs of time, the Haulotte teams changed all the visible parts, including the labels, control box switches and painted the machines. "They now look like new ones!", he says enthusiastically. The subsidiary will soon bring new models in its fully equipped workshop located in Madrid to continue the refurbishment program. "We thank Mainsa for the trust they are placing in Haulotte second life programs", says Ivan Morodo, General Manager of Haulotte Iberica.
