Sinoboom's new models to electrify bauma

9 August 2022 by Sinoboom

Sinoboom's largest-ever bauma Munich stand will feature a varied range of electric-powered MEWPs from its diverse product portfolio, featuring new and upgraded slab and RT scissor lifts, articulating and telescopic boom lifts and vertical mast lifts.

The selection of models on show is designed to meet the requirements of fleet managers and end users across a broad spectrum, representing solutions for the vast majority of working environments, working heights and lifting capacity demanded by the access sector.

Models on show include:

- Lightweight, compact and energy efficient scissor lifts, including new and upgraded models with enhanced working heights and front-wheel drive
- Slab scissor lifts from 8 to 13m platform heights, including models with lithium batteries and AC power, and units from Sinoboom's new European manufacturing base in Poland
- Rough-terrain scissor lifts with 1-click leveling and up to 680kg lifting capacity
- A range of new articulating boom lifts including one from the Plus series with 450kg lifting capacity
- New electric telescopic boom lift from the Plus series, with active oscillation and green, economical operation
- Vertical mast lift designed for optimal user-friendliness and maneuverability in narrow spaces

The accustomed high Sinoboom quality will be clear throughout. A robust build, world-class components and corrosion-resistant electrophoretic primer treatment come as standard across the whole range, alongside popular features such as boom lifts' 7-inch display screens for easy machine status information and maintenance management, and innovative bumper rails on scissor lifts which help to protect decals and bodywork against scratches during use and transportation.

The Sinoboom stand is located at FS.1002/3 and will be staffed by personnel from Sinoboom's headquarters and regional subsidiaries. In the three years since the previous bauma Munich, Sinoboom has established subsidiaries in Europe, North America and Australia, as part of a strategic global plan to provide localized, responsive services to worldwide customers.
