The first E-Telehandler from Wacker Neuson: TH412e

2 November 2022 by Wacker Neuson

A Bauma live premiere: The TH412e electric telehandler from **Wacker Neuson**. It is addition to Wacker Neuson's zero emission portfolio that makes a lot of sense and, thanks to its compact design, also enables work in confined spaces - without local emissions. The uninterrupted runtime is up to 3.1 hours with the standard battery and up to 5.2 hours with the optional battery. The telehandler features a Battery Management System (BMS) that monitors the lithium-ion battery, increases its efficiency and safety, and also eliminates deep discharge. The charging hatch at the rear of the machine is easily accessible and enables quick uncomplicated charging.

You can find the TH412e electric telescopic handler at Wacker Neuson's zero emission exhibition area and it is part of the demo show.
