Comansa presents Crane Mate, its novel digital solution for fleet management

18 November 2022 by Anmopyc

The Spanish tower crane manufacturer launched Crane Mate in October and presented it officially at Bauma 2022, alongside other new products.

As part of its commitment to the **constant improvement of its products and services**, Comansa has developed **Crane Mate**, a new **digital solution** for fleet **management** and **crane monitoring**, which provides **real time** technical information, location, alerts and crane productivity and maintenance parameters, as well as the possibility of reporting and configuring events and recording machinery lease periods, amongst other features. All of this translates to **increased efficiency** and **time and cost savings**.

The tower crane manufacturer was officially presented this cutting-edge communications technology at the **Bauma 2022** trade fair, from the 24th to the 30th of October in Munich.

Crane Mate consists of two elements:

- **Hardware:** complete kit pre-installed in the cranes, **in turnkey mode**, made up of commercial devices that facilitate both replacements and maintenance on the one hand and retrofit on the other.
- **Software:** platform **developed in-house** for online access, with restricted, secure access and which offers a display with the machine's settings and functions and other services that are useful to the client.

Thanks to all these features, Crane Mate offers **advantages to optimise and reinforce the use of tower cranes** in any construction project:

- **Comprehensive management** of crane fleets
- **Analysis and verification** of **hours worked**, **productivity** and **useful life** of the crane
- **Supervision** of **errors** and **alarms** in real time
- **Maximise** fleet **efficiency and profitability**
- **Reduction of** operating and service **costs**
- **Personalised** data reports
- Ad-hoc **integration** with third party **information technology platforms**

From October, all new tower cranes orders come with this new equipment included. Comansa will offer free trials, online tutorials and technical support for its clients.

Additionally, the manufacturer plans to continue developing new added value features and services over the coming years.
