Senn AG takes over STZ-VP 3 low loader semitrailer

2 March 2023 by Goldhofer

Senn AG, based in Oftringen, Switzerland, has taken over another **Goldhofer** low loader semitrailer for its transport division. The heavy-duty 3-axle low loader is designed for a payload range of approx. 46 t. The trailer is equipped with a 3-axle swing-axle chassis and provides an axle compensation of +/- 300 mm. This makes it suitable for use in extreme road conditions such as construction site entrances. The heavy-duty combination has a 6,600 mm long low profile deck that can be extended by a further 4,400 mm, as well as two additional pairs of extension beams of three and five metres in length. This means that long goods such as boilers or large machines can also be transported on the low profile deck.

"With the new 3-axle heavy-duty combination, we want to further expand our heavy-duty transport division and increase our capacities," explains Jörg Senn, Managing Director of Senn AG.
