- **KNAPP to present innovative automation technologies at automatica 2023**
- **Focus on automated guided vehicle systems, smart work stations, and intelligent software**
- **Solutions are scalable, adaptable, and flexible to meet future challenges**
- **Mission: Automation for the future to drive the industry forward**
- **Visitors can experience Open Shuttles, KiSoft FCS, and ivii smartdesk live at KNAPP stand 307 in Hall A4.**

KNAPP to present intelligent automation solutions at automatica 2023

KNAPP, technology partner for intelligent value chains, will present innovative technologies for automation in industry at the automatica trade fair in Munich on June 27–30, 2023. In Hall A4, stand 307, it's all about automated guided vehicle systems, smart work stations and intelligent software. Companies can optimally automate production and their internal transport and get ready for future requirements.

Constant change is the new reality of today's market. Companies are struggling with difficulty planning, the shortage of qualified personnel, increasing costs and resource shortages. They must prepare their warehouses and production for the challenges of the future. Companies want new automation technologies that are easily adaptable, flexible and intelligent. KNAPP's scalable transport systems and intelligent work stations provide the help companies need to manage these many challenges. The systems are flexible and grow as the company grows. KNAPP is pursuing a clear mission: "automation for the future".

Open Shuttle Fork by KNAPP is an innovation for AMR pallet transport. Its impact on the internal environment is minimal and can be easily installed without changing the building.

Mission: Automation for the future

This approach aims to drive the automation at companies forward, adapting it for the challenges of the future. As a value chain tech partner, KNAPP offers the right automation solutions: flexible solutions that grow as needed and that are adaptable and rapidly integrated. Solutions that support companies in automating for the future.

Intelligent automation solutions at automatica 2023

At the KNAPP stand 307 in Hall A4, visitors can experience the following automation solutions live and in person: the Open Shuttles, autonomous mobile robots for internal transport; KiSoft FCS, the fleet

management software for universal control of warehouse vehicles; as well as ivii smartdesk, the intelligent assembly assistance system for error-free production.

The ivii smartdesk is an intelligent assembly work station equipped with AI quality assurance technology – for error-free production.
