EvoQuip Launch the Mighty Falcon 820 Screen

17 November 2023 by EvoQuip (Terex)

- EvoQuip® introduces the Falcon 820 Inclined Screen, a new compact screening unit that combines scalping, screening, and stockpiling capabilities for various materials including sand, gravel, and demolition waste.
- The Falcon 820 features a high-frequency, double-deck two bearing screen box, designed to deliver high screening efficiency, faster throughput, and increased uptime for multiple applications.
- Adjustable incline angles on the Falcon 820 allow operators to tailor the screening process to specific material requirements, ensuring precise material separation and high-quality end products.

- **Constructed with high-quality materials, the robust design of the Falcon 820 promises long-term reliability, reduced maintenance costs, and maximized operational uptime.**
- **EvoQuip Product Manager, Andrew Armstrong, highlights the Falcon 820's combination of compact design, technological advancements, and powerful screening capabilities aimed at increasing customer productivity and competitiveness.**
- **The Falcon 820 is designed for easy transport and user-friendly setup, with excellent maintenance access to minimize downtime and enhance productivity on various job sites.**
- **T-Link telemetry system comes standard on selected Falcon screens, offering real-time performance data accessible via tablet or smartphone, aiding in effective machine management and uptime optimization.**

EvoQuip®, leading manufacturer of compact crushing and screening equipment, are thrilled to announce the launch of the EvoQuip Falcon 820 Inclined Screen. Combining scalping, screening, and stockpiling in one self-contained unit, the Falcon 820 features a double-deck two bearing screen box and can operate in multiple applications such as sand and gravel, crushed stone, coal, topsoil, and demolition waste.

With a large screening area and high-frequency double-deck screen, the Falcon 820 delivers outstanding screening efficiency, enabling faster throughput and increased uptime. It also offers adjustable incline angles, allowing operators to optimise the screening process based on specific material requirements. This flexibility ensures precise separation and exceptional quality of the final product. Built to withstand the toughest conditions, the Falcon 820 is constructed with high-quality materials and components. Its robust design ensures long-term reliability, reducing maintenance costs and maximising uptime.

Andrew Armstrong, EvoQuip Product Manager, expressed his excitement about the Falcon 820 Inclined Screen, stating, "We are proud to introduce the Falcon 820 to the market. It combines our expertise in compact machinery with the latest technological advancements, providing our customers with a powerful screening solution. This machine is designed to help our customers achieve optimal results, increase productivity, and stay ahead in a competitive market.

"Designed with mobility in mind, the Falcon 820 is compact and easily transportable, making it ideal for various job sites. Its user-friendly setup process and excellent maintenance access ensures minimal downtime and maximum productivity."

Selected Falcon screens come with the T-Link telemetry system fitted as standard, providing customers with real-time information on the performance of their machine, leading to effective machine management and maximum uptime. This data can be accessed through a tablet or smartphone and provides comprehensive information on the location, fuel consumption, tonnages, wear ratings and operating hours along with much more.

The Falcon 820 Inclined Screen is designed to meet the evolving demands of customers across various sectors, including construction, aggregates, recycling, and landscaping. With its advanced features and cutting-edge technology, this innovative machine provides an exceptional screening experience, maximising productivity and profitability.
