Aquajet Hosts World Tour Event in Germany

12 July 2024 by Aquajet

- Aquajet hosted a European World Tour event in Germany on June 5-6, attended by approximately 70 customers from eight countries.
- The event, held in Friedenweiler and hosted by Brokk Germany, featured educational presentations on Aquajet's Hydrodemolition technology and networking opportunities.
- Attendees previewed new product features and received advanced training on maximizing productivity with Aquajet equipment.

- Demonstrations included Aqua Cutter Hydrodemolition robots, the Ecosilence high-pressure pump, and the EcoClear wastewater treatment system.
- Aquajet showcased various efficiency-enhancing accessories and different Hydrodemolition scenarios to analyze conditions and settings.

Aquajet, a global leader in the design and manufacture of innovative Hydrodemolition technology, held a European World Tour event June 5-6 in Germany. Approximately 70 customers from eight different countries – Germany, Switzerland, France, Belgium, Norway, Italy, the UK and Australia – attended. Aquajet's German distributor, Brokk Germany, hosted the World Tour in Friedenweiler. The event provided educational presentations about Aquajet's fleet of products, Hydrodemolition methods and networking opportunities to help participants learn more about Aquajet equipment and the Hydrodemolition industry. Attendees also got a preview of new product features that will be launched later this year.

"It's an exciting time for Hydrodemolition. Technology is rapidly advancing, there is a greater demand for the services and a readiness to replace handheld methods with safer, more automated processes," said Roger Simonsson, Aquajet managing director. "Many new customers joined us at the event with great enthusiasm for Hydrodemolition. We spent a lot of time discussing applications and challenges and the potential for Hydrodemolition solutions."

The World Tour provided advanced training on how users can maximize productivity and achieve the best results with Aquajet equipment. Attendees had the opportunity to see Aqua Cutter Hydrodemolition robots and a variety of efficiency-enhancing accessories, including the Circular Power Head, Rotolance, dual and triple nozzles, the Extension Kit and Aqua Spine. They also got to experience the silent operation of the

Ecosilence high-pressure pump and see the EcoClear wastewater treatment system work with Aqua Cutters. In conjunction with one another, Aquajet's equipment provides contractors state-of-the-art productivity and safety with the perk of fully automated, on-site wastewater treatment that meets environmental regulations.

Aquajet also demonstrated different Hydrodemolition scenarios by request, such as a blow-through, so the group could analyze conditions, settings and other factors.

"There was an overwhelmingly positive reaction to the event," Simonsson said. "We always enjoy the opportunity to interact with customers and learn how we can expand our offering to address even more of their applications."
