Unveiling the SM Series: Yanmar's Exceptional New Tractors for Rural Landowners

27 August 2024 by Yanmar Tractor

- Yanmar America introduces the SM series tractors, tailored for rural landowners.
- The SM series includes the SM240 and SM475 models, with the SM240 available in both hydrostatic and gear-driven variants.
- The SM240 features a 36.9 horsepower Yanmar TNV engine and a front-end loader with over 2,000 lbs. of lift capacity.

- The SM475, Yanmar's most powerful North American tractor, offers 74 horsepower and advanced features like a clutch-less power shuttle transmission and deluxe cab.
- The SM series emphasizes durability, convenience, and comfort, with features such as ergonomic operator stations and advanced climate control.
- Yanmar provides a 10-year, 3,000-hour limited powertrain warranty for the SM series.

Yanmar America is proud to introduce its latest product line, the SM series tractors, now available to customers. The SM series represents a new standard in design, performance, and quality specifically tailored for the needs of rural landowners.

Yanmar America is unveiling three new SM tractor models: the SM240, available in both a clutch-less hydrostatic transmission variant and a gear-driven variant, and the SM475, Yanmar's highest horsepower tractor in North America, designed to handle the most demanding jobs on rural properties. Built for superior performance and durability, the SM series underscores Yanmar's commitment to providing sustainable solutions to the stewards of the land.

SM240/SM240H

With an impressive output of 36.9 horsepower from its fuel-efficient Yanmar TNV engine, the SM240 is ready to handle heavy loads and challenging operations with ease. Its front-end loader delivers over 2,000 lbs. of lift capacity, making it an ideal workhorse for a wide range of land management needs. Crafted with meticulous attention to detail, the SM240 draws inspiration from Yanmar's renowned engines, ensuring unparalleled durability and reliability. It prioritizes safety and convenience, featuring a foldable ROPS, a joystick-operated front-end loader, and an ergonomic operator station for style and comfort. The SM240H adds a clutch-free hydrostatic transmission for ease of use.

The SM475 features the highest horsepower Yanmar offers in North America.

SM475

With an output of 74 horsepower, the SM475 is Yanmar's most powerful offering in North America and combines advanced technology and luxury design for optimal performance and comfort. It features a clutch-less power shuttle transmission for effortless operation and allows adjustments to power steering, tilt, implements, and an optional joystick-controlled loader, without leaving the seat. The dual-entry deluxe cab, advanced climate control, ergonomic operator station with a digital command hub, and immersive audio system provide unmatched comfort while working.

"The SM series exemplifies Yanmar's long-standing tradition of delivering dependable and innovative solutions and sets a new benchmark in tractor performance with its advanced features," said Jon Richardson,

Director of Yanmar America's Rural Lifestyle Division. "These tractors represent the ultimate choice for landowners seeking exceptional durability and convenience."

The SM series boasts Yanmar's 10-year 3,000-hour limited powertrain warranty for peace of mind.
